No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1988 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 74

Number 1, January 1988

John B. Bell, Clint N. Dawson, and Gregory R. Shubin. An Unsplit, Higher Order Godunov Method for Scalar Conservation Laws in Multiple Dimensions 1

Stergios G. Yiantsios and Brian G. Higgins. Numerical Solution of Eigenvalue Problems Using the Compound Matrix Method 25

Giuseppe Gambolati, Giorgio Pini, and Flavio Sartoretto. An Improved Iterative Optimization Technique for the Leftmost Eigenpairs of Large Symmetric Matrices 41

R. Riedinger, M. Habar, P. Oelhafen, and H. J. Güntherodt. About the Delaunay–Voronoi Tesselation 61

D. Eyre and C. J. Wright. Adaptive Mesh Grading for Finite Element Solutions of an Integral Equation in Quantum Scattering 73

Alexander Bogomolny. A Method of Approximating Stiffness Matrices for Some Pseudodifferential Equations 85

M. Hosoya, E. Goto, and T. Soma. Extrapolated Boundary Element Method for Three-Dimensional Inductance Calculation 94

Ben-Yu Guo and Wei-Ming Cao. The Fourier Pseudospectral Method with a Restrain Operator for the RLW Equation 110

Stuart M. Rothstein and Jan Vrbik. Statistical Error of Diffusion Monte Carlo 127

M. A. R. Sharif and Ahmed A. Busnaina. Assessment of Finite Difference Approximations for the Advection Terms in the Simulation of Practical Flow Problems 143

Guy Lonsdale. Solution of a Rotating Navier–Stokes Problem by a Nonlinear Multigrid Algorithm 177

J. G. Blom, J. M. Sanz-Serna, and J. G. Verwer. On Simple Moving Grid Methods for One-Dimensional Evolutionary Partial Differential Equations 191

D. W. Kelly, R. J. Mills, J. A. Reizes, and A. D. Miller. *A Posteriori* Error Estimates in Finite Difference Techniques 214

Renato Spigler. Numerical Treatment of a Boundary-Value Problem for a Certain Singular Parabolic Partial Differential Equation 233

Renato Spigler. Numerical Simulation for Certain Stochastic Ordinary Differential Equations 244

List of Forthcoming Articles 263

JEPPE OLSEN, HANS JØRGEN AA. JENSEN, AND POUL JØRGENSEN. Solution of the Large Matrix Equations Which Occur in Response Theory 265
J. A. SETHIAN AND AHMED F. GHONIEM. Validation Study of Vortex Methods 283
FADIL SANTOSA AND WILLIAM W. SYMES. High-Frequency Perturbational Analysis of the Surface Point-Source Response of a Layered Fluid . . 318
P. GLAISTER. An Approximate Linearised Riemann Solver for the Euler Equations for Real Gases 382
PETER HALL AND RICHARD L. SMITH. The Kernel Method for Unfolding Sphere Size Distributions 409
ANTONIOS E. GIANNAKOPOULOS AND ANTONIE J. ENGEL. Directional Control in Grid Generation 422
PAUL MURRAY AND G. F. CAREY. Finite Element Analysis of Diffusion with Reaction at a Moving Boundary 440
JAMES A. VIECELLI. Estimating Limits on Resolution and Predictability in Computations of Hydrodynamically Unstable Flows 456
H. J. GARDNER, R. L. DEWAR, AND W. N-C. SY. The Free-Boundary Equilibrium Problem for Helically Symmetric Plasmas 477

NOTES

FULVIO MELIA. A New Technique for Solving Parker-type Wind Equations 488
JOHN K. DUKOWICZ. Efficient Volume Computation for Three-Dimensional Hexahedral Cells 493

ANNOUNCEMENT 497

LIST OF FORTHCOMING ARTICLES 498

AUTHOR INDEX FOR VOLUME 74 499

Journal of Computational Physics

INFORMATION FOR AUTHORS

The purpose of the *Journal of Computational Physics* is to publish articles concerning techniques developed in the solution of data handling problems and mathematical equations, both arising in the description of physical phenomena.

Manuscripts should be submitted to: The Editors, *Journal of Computational Physics*, University of California, Lawrence Livermore National Laboratory, P. O. Box 5509, L-561, Livermore, California 94550, U.S.A.

Only original papers will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editors' discretion. Articles and any other material published in the *Journal of Computational Physics* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editors and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be typewritten with wide margins on high quality 8.5×11-in. bond paper, using double spacing throughout. If larger paper must be used, the text must still be within these dimensions. A minimum of three copies should be submitted; however, in order to expedite handling of manuscripts, five copies are desirable. The original of the manuscript and figures (including computer-generated data) need not be submitted until acceptance, as long as the copies are clear and reproducible. Figures and tables must be in all copies.

Each page of the manuscript should be numbered consecutively. Page 1 should contain the article title, author, and coauthor names with complete affiliation(s). At the bottom of this page should appear the subject classifications and key words (see below). Page 2 should contain a proposed running head of less than thirty-five characters. It should also contain the name and complete mailing address of the person to whom proofs are to be sent. Page 3 of full articles should contain a short abstract.

Notes. Short notes of 10 pages or less (including figures, tables, and references but excluding title pages) regarding the availability of interesting and useful new programs or tabular material will be considered for publication. Letters to the Editor commenting on articles already published in this Journal will also be considered. Neither notes nor letters should have an abstract.

With the exceptions noted below, authors should be guided by the *Style Manual*, 1978, of the American Institute of Physics.

Subject Classification. Authors are required to classify their own manuscripts using the 1980 *Mathematics Subject Classification*, reprinted from the 1978 *Mathematical Reviews Index*, pp. S27–S34, with the additional classifications listed in the January 1, 1981 issue. Authors are requested to choose at least two categories—one in numerical analysis category 65, and one other (generally a physical classification) from the categories beyond 65.

List of Symbols. If the paper is accepted for publication, it is of vital importance that the author submit a complete list of symbols. The symbols used should be identified for the typesetter **phonetically.** This list will not appear in print but is essential to avoid costly corrections in proof. The author may prepare his or her own list or use a preprinted form supplied by the Editors.

Tables. Number tables consecutively with Roman numerals. Extensive tables will be reproduced photographically and should be typed carefully in the **exact** format desired. Authors will be charged for any new photoreproductions necessitated by changes in proof. Use superscript lowercase italic letters for table footnotes, which should be typed immediately below the table. Type tables at least double-spaced, including titles and footnotes. Do not underline table titles; reserve underlining for text that is to be *italicized.*

Equations. Equations should be typewritten whenever possible and the number placed in parentheses at the right margin. Reference to equations should use the form "Eq. (3)" or simply "(3)." Superscripts and subscripts should be typed or handwritten clearly above and below the line, respectively. Use the exponent $^{1/2}$ whenever possible.

References. References should be cited in the text by a number in square brackets. Literature cited should appear on a separate page at the end of the article and should be styled and punctuated according to the standards of the American Physical Society and using standard abbreviations for journals (see *Chemical Abstracts Service Source Index*, 1985). See the following examples:

1. D. Schnack and J. Killeen, *J. Comput. Phys.* **35**, 110 (1980).
2. I. Gohberg, P. Lancaster, and L. Rodman, *Matrix Polynomials* (Academic Press, New York, 1982), p. 54.
3. R. Gross, M. Koyanagi, H. Seifert, and R. P. Huebener, in *Proceedings, 17th Int. Conf. on Low Temperature Physics, Karlsruhe, West Germany, 1984*, edited by U. Eckern *et al.* (North-Holland, Amsterdam, 1984), p. 431.

For unpublished lectures of symposia, include title of paper, name of sponsoring society in full, and date. Abbreviation of DOE Laboratory report names should follow the style of *Nuclear Science Abstracts.* Give titles of unpublished reports with "(unpublished)" following the reference. Further examples and instructions are available from the Editors.

Footnotes. Footnotes in the text should be avoided if at all possible. If they must be used, identify by superscript numbers and type together on a separate page, double-spaced.

Figures. All illustrations are to be considered as figures. Number each graph or drawing in sequence with Arabic numerals. Supply a descriptive legend for each figure. Type legends double-spaced consecutively on a separate page.

Plan figures to fit the proportion of the printed page. Use a professional lettering set on the original so that the letters and numbers are large enough and "open" enough to take a reduction of 50 to 60% without filling in the ink. Do not include background grids; however, on paper with blue lines the grid can be eliminated in the process of photoreproduction. Identify each figure in a margin with the name of the journal, author's name, and figure numbers; avoid marking the backs of figures.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased.
